

PubMed & EndNote

Downloading Citations from PubMed

- 1) Access PubMed from the UCSD Library's website – <http://biomed.ucsd.edu/pubmed> – a good starting point and resource page.
- 2) Perform your PubMed search.
- 3) To mark specific citations for downloading, click the box next to each citation you want to select. To save all the citations in the list, do not select any and PubMed will automatically include all.
- 4) The following setting will need to be changed and a command used:

- a. Change the display format from “Summary” to **MEDLINE** by clicking on the pull down menu next to the Display button in the gray bar above your search results, select MEDLINE from the list.
 - b. Use the **Send To** pull down menu and select **Send to File**.
 - c. In the **Save As** window that appears, select the desktop or a folder where you want to save your search. In the **file name** box, you can use the default name (pubmed-result.txt) or type a different file name.
 - d. Click on **Save**.
- 5) Proceed to step 1 in the Importing PubMed references section, below.

Importing PubMed References into EndNote

- 1) From the EndNote File menu, click on **New** to create a new library of references, or **Open** to add references to an existing library.
- 2) From the **File** menu, click **Import** to open the Import window.
- 3) In the **Import Data File** field, select the file you downloaded from PubMed by clicking on **Choose File**.
- 4) In the **Import Option** field, select the filter you would like to use to import your references. Since you downloaded your references from PubMed, choose **PubMed** from your list of filters. If you have not previously selected PubMed as a filter, select **Other Filters** from the pull down menu, then select the PubMed file.
- 5) Under **Duplicates**, identify what you want EndNote to do with duplicate references.
- 6) Click on **Import**. You will now see the references from PubMed – use them as needed.
